

Besides new forms of education, activities in the field of science and research are regarded by the Faculty as one of its primary activities and as the basis of its international acceptance. The scientific profile of the Faculty and the results achieved by the Faculty that are recognized internationally are promising for the years to come. They reflect the continuous scientific activities of teachers as well as the development of scientific life at the Faculty in form of involvement of young teachers in scientific activities, in particular by involving them in grant research teams, and cooperation with specialized international governmental and non-governmental organizations in various legal scientific spheres of public and private law.
